

TIS INCIDENT REPORT

S.P1229.6.13 Page 1 of 1

Project: TIS		Incident Num	ber/Reference:	013	
DESCRIPTION (data and sequence of actions leading to fault, details of actual and expected response)					
With the code Admin.adb exceeding the length of v					for input data
Found in test:	N/A				
Supporting documentation atta	nched `	/ES/NO		Continued	YES/NO
Found during: Reqs /Sys spec/Security Spec/Proof of Spec/Formal Design/INFORMED Design/ (use actual project stages) Proof of Design/Code/Code Proof/Integration/Sys test/Acceptance					
Date: 16-7-2003		Signature of 0	Originator:	eles L	
EVALUATION (include list of items affected, details of work required, other similar faults, tests to be re-run)					
The data type in Keyboard.ads representing input data should be extended to allow for longer input messages. The checks within Admin should assume the input data is in Upper case (Keyboard will convert the input to Upper case to prevent case sensitivity). and should check that the input data length is consistent with the allowed ops. It is also more convenient to do and line completion in admin package, admin.adb should be updated. Note keyboard.ads is not currently under fault control.					
				Continued	YES /NO
